PRESENT-DAY types of Britain’s world-famous livestock have been developed by patience, study, selection and research. This is equally true of Fisons Fertilizers.

It’s Fisons for Fertilizers
Fisons Limited - Harvest House - Ipswich

To record remarkable performance by a flock for a title of Mr. C. J. Lamb, Sedles House, Longhirst, Morpeth, owner of Northumberland’s Ambassador Ayrshires in the large-herd section of.

In 1,500-1,550 cwt. records, the Lambhead herd was selected in 1941, with bought-in heifers, and the cows were reared by two-milker last year, yet on a daily slating to give 4.5 cwt. of milk. The cow joined the 12 full-time cows was 15,007 lb. of milk, and of which no less than 10,022 lb., now, 40% of which, the milking is increased during the present season. Not only in the outstanding young family Silcock-fed.

To the Scottish Agricultural Service was responsible for its rationing.
The ideal LORRY for Farm work

This long-wheel-base 3-ton Morris-Commercial is surprisingly easy to handle because, although fitted with heavy-duty steering, it handles like a car. The robustly constructed 16 ft. 6 in. body has full drop-back and two-piece sides. Powered by a four-cylinder long-stroke petrol engine or Morris-Commercial Super six-cylinder petrol unit, this remarkably efficient vehicle can deal with heavy loads over high yearly mileage at surprisingly low fuel and maintenance costs. Write for fully descriptive literature.

Nash and Thompson
Ice-bank milk cooler
* reliable
* economical

 OPERATION
125 gallons of milk in an insulated tank is refrigerated by 3 b.h.p., twin-cylinder unit, and is kept at 36°F. This has been maintained uniformly at constant temperature, so the chilled milk is always available.

 CARAVETS
Costs up to 35 gallons a day in two windings. Can be used with eithercarousel or moderate cold storage.

 SPECIFICATIONS

 M. W. 3 y.
 Fresh, unskimmed whole milk pasteurised in small150 lb. pasteuriser. Consumption approximately 14 units a day.

 Easy to keep always supplied, independent of cold storage, * efficient, economical.

 Automatic, trouble-free operation.

 Reliable, World-widely used construction.

 Guaranteed and serviced free for one year.

 Standard £180.

LUBRICATION AND MAINTENANCE EQUIPMENT

The LAYCOCK "Coronation" Electrically operated Lift is ideal for all farm vehicles, trailers, and other implements. Its use enables them to be quickly elevated for greasing and servicing.

Complete accessibility in a few seconds.

For the small grower

The "Bobby" is specially designed for small parcels of grain and seed. It is portable and compact, housing only 5 ft. 6 in. high, 10 ft. 6 in. wide and 4 ft. 6 in. long. Its crescent-shaped hoppers allow for top feeding.

Simpex BAIL MILKERS AND DAIRIES
solve the problem of unsuitable buildings.

In the absence of suitable permanent buildings. SIMPLEX BAIL MILKERS offer modern and economical facilities for producing clean milk. Although fairly mobile, so that the equipment can be taken to distant locations, they can be sufficiently mobile to be moved from farm to farm.

SIMPLEX and BAIL MILKERS are available in very compact forms for small areas, but complete units for larger areas. Illustrated literature will be sent on request.

QUANTITY AND QUALITY

A new measure of quality in milk and milk products has been devised in the form of a grade symbol, the "A" symbol, by the National Milk Marketing Board. The symbol indicates that the milk has been examined and passed by the Board's inspectors at least six times. The symbol is to be used on all milk containers, and will also be shown on all dairy products made from milk. The symbol will be a guarantee that the milk is of the highest quality, and will enable purchasers to be sure that they are buying the best possible product.

The Editor's Diary

"Are you feeding worms?"

Worms are a great pest in many gardens, and it is important to take steps to control them. There are several methods that can be used, such as the use of worm castings, which can help to improve the soil structure and fertility. It is also important to maintain a healthy and balanced diet for the plants, as this can help to prevent the growth of worms. Regular watering and weeding can also help to reduce the number of worms in the garden.

Troublesome Spring

A new season brings new challenges, and this spring is no exception. The weather has been unpredictable, with sudden storms and temperature fluctuations. This can make it difficult to plan for the season, and it is important to be prepared for any unexpected events. It is also important to keep a close eye on the crops, and to be ready to take action if necessary.

From Honeygreek

This year, for the first time since 1991, the Association has a Scottish representative, Mr. James MacKenzie. He is based in the area and works closely with the local farmers to ensure that the honey production is of the highest quality. His work is supported by the other members of the Association, who are dedicated to promoting the benefits of honey and improving the quality of life in the region.

WE CANNOT FORCE CHOICE ON PUBLIC
Mr. George Brown,
Government Agricultural Import Policy Defences

CRITICISM of the Government's policy of per- missionary imports was expressed by Mr. George Brown, MP, at the recent meeting of the National Farmers' Union, when he said that the Per- missionary Board had been used as a source of income to the Treasury, but that it would be better if we had proper control of our own industry. Mr. Brown said that the policy of the Government was a menace to the agriculture in Britain, and that it would be better if we had proper control of our own industry. Mr. Brown said that the policy of the Government was a menace to the agriculture in Britain, and that it would be better if we had proper control of our own industry.

FULL SCALE PIG GRADING IN 1952
Sit James Turner Answers The Critics: Calls For Maximum Self-sufficiency in Feedingstuffs

Pig grading in 1952 will be conducted in a year from now, according to an announcement by Mr. James Turner, Secretary of the National Farmers' Union, latest Tuesday. A sharp decision will be made by the Government in the autumn session to settle whether the farmers are necessary to the country. If it is decided that the farmers are necessary to the country, then the Government will give full support to the farmers in their efforts to increase pig production. If it is decided that the farmers are not necessary to the country, then the Government will give no further support to the farmers.

NEW WOOL PRICES NEXT WEEK

"Bad Producers Will Be Penalised"

This British Wool Marketing Board has decided to fix high prices for raw wool next week. This was announced on Tuesday by Mr. H. L. Clarke, the Board's general manager, and was endorsed by Mr. J. J. Thomas, the Board's inspector for South and South-Western districts.

Of the various wool prices, the most important are the Board's new price for wool to be paid to the farmers. This is 64 per cent of the average market price in London, and 10 per cent more than the current price paid for wool in New South Wales.

Mr. Clarke said that the price was intended to give the farmers a fair return for their wool, and that it would also encourage them to grow more wool. He also said that the Board was prepared to pay the farmers for wool in any quantity they were able to produce.

PUBLIC OWNERSHIP OF MEAT RINGS

The Government has decided to take over the meat rings, and make them a public company. The move is expected to benefit farmers and consumers alike.

Mr. D. E. Smith, Minister of Food, said that the Government was aware of the problems faced by meat producers and consumers, and that it was determined to take action to improve conditions.

The move is expected to bring several benefits, including the reduction of costs for farmers and consumers, and the provision of a stable market for meat.

MILK RECORDS SPURT

1950 Membership Increase Tackles Average Rate

The recent increase in membership of National Milk Records has been rapid. The organization has been able to increase the number of cows recorded from 2,000 in 1949 to 24,000 in 1950. This is an increase of 1,800 per cent.

The increase in membership has been accompanied by an increase in the average milk yield per cow. The average yield per cow in 1949 was 350 pounds, while in 1950 it was 390 pounds.

There are several factors that have contributed to the increase in membership. One of the main factors has been the introduction of new methods of recording and analysis. These methods have enabled the organization to provide farmers with more accurate information about their cows.

Another factor has been the improved facilities for recording and analysis. The organization now has a network of recording stations throughout the country, and is able to provide farmers with accurate information about their cows.

The increase in membership and average milk yield per cow is expected to continue in the future. The organization is confident that it will be able to provide farmers with even more accurate information about their cows in the future.
Overseads Round-up

A PRT survey of Ohio dairy herds showed that an estimated 20% of the Ohio dairies had a milking machine. This type of equipment has been increasing in popularity due to the mechanized system of forming milk with easier handling and less labor. The survey also indicated a higher percentage of dairies with second-hand machines in use.

Ohio Butter, cream, and cheese sales for the week ending on 8th August 1948 show that sales have been increasing steadily. The sales for the week were up by a significant margin compared to the previous week.

Agricultural products during the last month have not only shown stability but also an increase in demand. This is due to the improved weather conditions and the increasing population.

Vegetable cattle breeding is still a popular method in many parts of the country. This method is still preferred by many farmers due to its simplicity and the fact that it does not require much investment.

Because of the improved weather conditions, the vegetable cattle breeding is expected to continue for some time. The improved conditions will also provide better opportunities for farmers to increase their production.

The farmers are also encouraged to continue their efforts in the vegetable cattle breeding. The improved weather conditions will provide better opportunities for farmers to increase their production.

R.A.E. FORAGE HARVEST CONTESTS: REPORT

Good Performance Despite Weather

An official report issued on the R.A.E. forage harvest contests showed that despite the poor weather conditions, the performance of the forage harvesters was commendable. The report attributed the good performance to the efficient maintenance and regular operation of the machines.

DUTCH DUSTER

Designed originally in Holland, the Dutch Duster has now been adopted by British farmers. The machine is designed to spray and dust crops with ease.

Final Awards

Green crop machines were awarded for excellent performance. The machines were judged on their efficiency and the quality of the work they performed.

PIGS FOR JAPAN

Battle Weary: A 2000-tonne pig shipment was sent to Japan last week. A similar shipment was sent to the United States last month.

Mr. J. M. Harris, the chairman of the Pig Industry Board, welcomed the move and said that it would help to maintain the established export market for pork.

Mr. J. M. Harris also announced that the Pig Industry Board would be ready to receive any further export orders for pork.

WANTED—A GRASS RECORDING AUTHORITY

This will mark the end of our subscription to the British Journal of Agricultural Science. It is now the time to turn our attention to the recording of grass and other forage crops.

Mr. J. M. Harris, the chairman of the Pig Industry Board, welcomed the move and said that it would help to maintain the established export market for pork.

Mr. J. M. Harris also announced that the Pig Industry Board would be ready to receive any further export orders for pork.

GRASS SEIGLE COSTS

6% for top 10

Arable yields twice as much

Being an arable crop, grass yields twice as much as an arable crop.

AGRICULTURE AND THE ECONOMY

Mr. J. M. Harris, the chairman of the Pig Industry Board, welcomed the move and said that it would help to maintain the established export market for pork.

Mr. J. M. Harris also announced that the Pig Industry Board would be ready to receive any further export orders for pork.

RESEARCH PLAN FOR BOAT

Although the Ministry of Agriculture is keen to see the development of new grasses, there are several practical problems which need to be overcome before this can be done.

Mr. J. M. Harris, the chairman of the Pig Industry Board, welcomed the move and said that it would help to maintain the established export market for pork.

Mr. J. M. Harris also announced that the Pig Industry Board would be ready to receive any further export orders for pork.

UNREGISTERED WOOL GROWERS

At the recent meeting of the National Wool Growers' Association, Mr. J. M. Harris, the chairman of the Pig Industry Board, welcomed the move and said that it would help to maintain the established export market for pork.

Mr. J. M. Harris also announced that the Pig Industry Board would be ready to receive any further export orders for pork.

A HARD WINTER REDUCES STOCK

FROM THE MACHINERY PARK

Both large and small-scale equipment was on display at the Dublin Spring Show which opened on Tuesday. Particular emphasis was laid on new equipment for land reclamation work, for the Irish Government is encouraging farmers to re-plant with as much as possible.

Visitors saw the giant equipment capable of reclaiming vast areas of bog and mountain land for various purposes. There was ample evidence from the exhibits of the tremendous scope of the equipment and the cost of hardening.

"Farmers Weekly" pictures show some machines now available on the Irish market.

850 GUINEAS FOR SHORTHORN BULL

Strong Bidding at Gwbert Herd Sale

Last week at Gwbert Farm, Caersws, Mrs. R. E. Jones, a Welsh-bred Shorthorn bull, fetched 850 guineas at the Gwbert Herd Sale. The bull, which was bred by Mr. J. H. Davies, Cader, Dinas Aderyn, Aberystwyth, was purchased by Mr. G. J. J. Ferrier, Crieff, Perthshire, from whom it is expected to go to Australia. The bull was shown and judged by Mr. J. H. FEATURES of the sale of the remnant portion of Monks Family and Trumper's Herd is the very high yielder and the 95 per cent. Jersey bull was expected to sell for £500. The top price of the sale was £400 for a bull calf from Mr. W. N. Smith, Highgrove Herd. The average per head was £135.50.

The reserve champion at the Lincoln Red bull sale at Lincoln county won £119 for 52 Jerseys: High Yielder's Offspring Average £258.

Scots Take Crewe Honours

SCOTLAND achieved second place in the heat of the male and female challenge medals, which were awarded to Mr. and Mrs. A. J. Brown, Killermont, Auchenharvie, Renfrewshire, for the highest yield in the male section and to Mrs. J. A. Hunter, Ochtertyre, Perthshire, for the highest yield in the female section. The male champion was Mr. and Mrs. A. J. Brown, Killermont, Auchenharvie, Renfrewshire, with a yield of 15,500 pints of milk from a cow at 8 months old. The female champion was Mrs. J. A. Hunter, Ochtertyre, Perthshire, with a yield of 10,000 pints of milk from a cow at 12 months old.

IMPERIAL CHEMICAL INDUSTRIES LTD LONDON W1!
Ferguson fights battle for food

Miss Alice Brown, 18-year-old agricultural contractor of Chesterfield, packs for ten miles to collect farm produce held up by the wettest spring for ten years. The ease of handling the Ferguson equipment is a big factor in her ability to work on rough farm areas without undue fatigue.

All over Britain, farmers are trying to make up for lost time. On their success or failure depends Britain's food. And their success depends on mechanisation. Of all machines that can help the farmer in this crisis, the Ferguson system of complete farm mechanisation can help him most.

Because they develop greater traction and penetration without excess weight, Ferguson tractors and implements can get on to the land sooner than heavier tractors—and continue harvesting it. They enable young and old to do more heavy work with less fatigue, in less time. Most implements can be operated by one man from the driver's seat. Automatic protection against damage to implements from hidden obstructions prevents breakages and costly delays.

All over the country, farmers are being helped by the Ferguson system in the Battle for Food. And they are being backed up in every possible way by the Ferguson Dealer Organisation and the Ferguson Service System. Above all, it's a time when running must be kept up, while the top spot is keeping Ferguson equipment in running order round the clock.

TO BEAT THE FOOD CRISIS

Farm Faster with Ferguson

Ferguson tractors are manufactured by HARRY FERGUSON LTD., COVENTRY. by The Standard Motor Company Ltd.

AND A HOST OF RATS

It was a very odd feeling, I suppose, to find that the elderberry bush was a menace. But the elderberries grow thick and the birds and the blackbirds and the thrushes were very much in evidence. And I was delighted to see them there. And I was delighted to find that the elderberries were good for the birds. They are not a menace to us. They are a menace to other people. They are a menace to the blackbirds and the thrushes. They are a menace to the birds.

The weather was, of course, not to be defeated. The wind was blowing hard and the sun was shining bright. The weather was good for the blackbirds and the thrushes. They were having a good time. They were taking their time. And I was glad to see them there.

I was also glad to see the elderberries. They were good for the birds. They were good for the blackbirds and the thrushes. They were good for the birds.

Commando Leaves

They are not as far as I can see, the work on my farm between now and harvest will cease entirely by April. But the elders are in full flow, and the elderberries are still there. They are still there. They are still there.

The Coriander

I am afraid that there is a lot of coriander in the field. I am afraid that there is a lot of coriander in the field. I am afraid that there is a lot of coriander in the field.

Raisins from the Bushes

Raisins from the bush have been found in the soil. They are in the soil. They are in the soil. They are in the soil.

“Way Past 40”

Tired of being the only one in the village who has a telephone? Tired of being the only one in the village who has a telephone? Tired of being the only one in the village who has a telephone?

Back to Mangelwurz

Kale, leeks, and other vegetables that grow well together. The smaller the bed, the better. And an older bed is better than a young one. The smaller the bed, the better.
Not a weed for miles!

The man who used to lean on a gate despairingly, and shake his head at charlock, pursely and fat hen among his crops, feels a lot better about them now. Thanks to the 'know-how' that Plant Protection supplies, there's a weed in sight. 'Agroxone' did the trick, without harming the good crops — and it's harmless to game, too! Plant Protection scientists are experimenting fully before allowing 'Agroxone 2' for use on peas; but meanwhile this selective weedkiller, now at double strength, will increase your cornfields' yield economically and save hours of labour. Weeds never even get a chance to grow with...

'AGROXONE 2'

powder weedkiller

SUPPLIES AND INFORMATION FROM APPOINTED AGENTS OF PLANT PROTECTION LTD

The Festival of Britain Exhibition at South Bank, London, opens today. Its aim — to give the visitor a pocket-size sample of Britain — our people, our industries — our way of life — and the land itself that is the enduring background of our varied history. The land's share in the Festival is outlined on this and the following pages.

The farmer has adopted a new garb, ready for the occasion. But his problem is more fundamental. Part of our purpose has been to indicate the landscape they have preserved.

The Festival booklets are made from recycled paper, showing present-day industrial associations. The papers played by scientists, engineers and laymen are given emphasis, and tell us how great Britain is thinking about it.

LOOK STRANGER, AT THIS ISLAND HERE

The Country has an "inimitable" method of showing the inner activities at South Bank.

Oxidation Standards

One of the products which emerges from the exhibition is a variable-speed motor, now available. This will be mentioned in the context of the Festival's aim to excite interest in the country of the world. The country's wealth lies in the pasture, the farms and the countryside. But the visitor from either side of the Atlantic will find that Britain is conscious of its responsibilities.

Farm and Factory: N.I. Show

The countryside to the N.O. is already known to England on factory lines. A large exhibition will be held in the North East of England, in Whitehall, Northumberland. There, the latest developments in the farming industry will be exhibited. The exhibits will be divided up into various parts, each with its own particular interest, and the visitors' own interest will be stimulated.

There will be a fine weather deck, where visitors can enjoy the beauty of the country, and the latter devoted to the agricultural development and progress of the country.

FARMING'S STORY—Crystals to South Bank

AGE-OLD TASKS

MAN-POWER

HORSE-POWER

STEAM-POWER

NEW-AGE POWER

1951

THERE are a number of the country sections of the Festival of Britain, South Bank Exhibitions in 1951 are "geared-up utilizations of the land" and associated with scientific research and mechanization in British agriculture. So in limited space, machines and equipment are prominent.

The present and growing agriculture productivity since 1851, the internal combustion engine, is represented by a display of tractors aimed to show that all can see them.

Few machines—those wheeled and one crawler—are positioned on pedestal lifts. Though no mechanism shown will move forward or backward, each will travel over 100 vertical miles during the Exhibition, for it is calculated that each will make 118,000 accounts and elements.
FESTIVAL FARM

E. J. SMITH visits Dolbadern at the head of Lake Bala in North Wales, where postal visitors will see what Britain is doing to bring back a way of farming and living which was a long dark period kept alive only by the endurance and faith of a few people.

The Dcoholic Scheme, as described in an excellent article in the rural section of the Daily Mail last week, is a notable contribution to the Festival of Britain, and the only single scheme of its kind in the country. It is a complete and comprehensive example of what can be done by local authorities to bring back a new life to the countryside. It is a scheme which will be of interest to all those who are concerned with the problem of rural life and the future of the countryside.

Dolbadern is a small village nestled in the foot of the Pennines, close to the town of Llanberis in the heart of the Snowdonia National Park. It was the centre of a great hill farm, but when the war came the village was abandoned and the farms were left to fall into ruin. The Festival of Britain has given new life to the village, and the scheme has been a model for others to follow.

The scheme includes a new village hall, a community centre, and a recreation ground. There is a new school, a library, and a health centre. The villagers have been given new homes, and the old cottages have been modernized.

The new buildings include a hostel for visitors, a workshop for the making of tools and equipment, and a workshop for the making of furniture. There is a new community centre, a library, and a health centre. The villagers have been given new homes, and the old cottages have been modernized.

The scheme has been financed by the local authorities, with the help of the Rural Development Commission, and the British Council. The Festival of Britain has given new life to the village, and the scheme has been a model for others to follow.

DODGE HANDLING PLEASES DRIVERS

TRUCKS • YANS • TIPPERS

Kew-built DODGE

DODGE BROTHERS (BRITAIN) LIMITED • Kew, Surrey

You can’t get over it!

You can’t get over the fact that the Bristol 20 is the most efficient tractor for difficult conditions — and the least expensive, too. It ploughs two furrows up a 1 in 2 gradient. It maintains a full drawbar pull on soft soil or wet, where no-scooled machine can grip. The Wide Track Model has unequalled lateral stability on hills: the Narrow Gauge Model is the most powerful tractor that is narrow enough to work hops, fruit, raspberries, celery, vineyards, and sugar cane.

WEIGHT approximately 3,500 LBS.
DB PULL approximately 4,000 LBS.
PRICES from £480

BRISTOL 20

Let’s Learn From Each Other...

LAURENCE F. EASTEBROOK
reviews a report on the 4-H Clubs of America

Critical Faculty

Critical Faculty

The 4-H Clubs of America have much in common with our own Young Farmers’ Clubs. There are also many differences — as is evident from the report by Mr. Amos B. Yores of the National Federation of Y.F.A.s compiled after an extended tour of the United States. It is from a study of these differences, thinks Mr. Easterbrook, that both can learn.

4-H Clubs Membership

Membership is open to anyone who is at least 10 years of age who is a citizen of the United States or a U.S. who has been granted citizenship by naturalization.

Projects and Activities

Projects are chosen by the 4-H Clubs that will appeal to members and that they can carry out. Projects are not chosen by the 4-H Clubs, but are decided by the 4-H Club leaders.

Campus

Campus plan an important part of the 4-H Club program. The campus is the place where the members gather to work on their projects and activities. The campus is usually located in a rural area, but it can also be in an urban area.

John Leader
Making good hay—sooner!

Sweep your hay, before it is all dried, on a "2A" improved slitting-drying baler, and bring a precious crop to the barn at least two days less risk.

Machine milking is as good as the finest hand milking, but cheaper and far—far cleaner.

STORAGE HARVESTERS ON TRIAL

On various types of foreign harvesters arranged by the R.A.E., last season, to show what has been given to the way a considerable place of development in this branch of agricultural machinery was occupying the minds of farmers and equipment manufacturers. It was only in the last two years that these machines were seen in large numbers on farms.

WHAT THE JUDGES SAID

The judges, most of whom are familiar with the various types of harvesters at present in use, were most impressed with the work of the British harvesters. They all agreed that these machines were not only capable of doing the work of the foreign harvesters, but that they were doing it more quickly and efficiently. The judges also pointed out that the British harvesters were more adaptable to the conditions of the British farm, and that they were better suited to the British type of farming.

PROTYPs—FIRST $500 DIVIDED

The Warburton-Telford picker-up harvester, designed by Mr. G. Warburton, is a good example of a British harvester. It is a simple machine which can be used in both small and large fields, and is very popular in the farming community. It is a picker-up harvester, and is very popular in the farming community. It is a picker-up harvester, and is very popular in the farming community.

Profit from Fertilizers

Overhead and cultivation costs are difficult to reduce but they are an out of line item which can be brought under control.

For the farmer, solution of this problem is found in the use of fertilizers.

The use of fertilizers has been a growing trend in recent years, with the demand for higher crop yields.

Profit can be made from the use of fertilizers by increasing the crop yield and reducing the costs of cultivation. This can be achieved by selecting the right fertilizer and applying it at the right time and rate.

The choice of fertilizer depends on the crops being grown, the soil type, and the farming system. It is important to consult with a fertilizer expert to determine the best fertilizer for your specific situation.

Profit from Fertilizers

It's Fisons for Fertilizers

HEAD OFFICE - HARVEST HOUSE - DARWIN

Right: This nine-horse tractor is working on Mrs. Bond and Mrs. Barker's farm near Sheffield. The driver is a local man and the tractor has been specially designed for the job.

The farmers of the Peak District are the beneficiaries of this new agricultural machine, which has been designed specifically for the area's hilly terrain.

The tractor is fitted with a special type of wheel which enables it to negotiate steep slopes and rough terrain with ease.

A special feature of the tractor is its ability to adjust its weight distribution, allowing it to carry heavy loads over rough ground without sacrificing maneuverability.

The tractor has been built by a local engineering firm and is being used for a variety of tasks on the farm, including ploughing, harrowing, and digging.

The tractor is being used by the farmers as a way to increase their productivity and efficiency, and it is expected to significantly reduce their costs.

The tractor's design and performance are remarkable, and it is expected to set a new standard for agricultural machinery in the area.

Charger for Grazing

A charger is a type of farm tractor that is used for grazing purposes. It is a small tractor designed specifically for the purpose of moving livestock from one grazing area to another.

Chargers are typically used on farms where the livestock is moved from one area to another on a regular basis. They are also used to move livestock to and from the barn or other sheltered areas.

Chargers are designed to be lightweight and compact, allowing them to move easily on rough terrain. They are also designed to be easily maneuvered, allowing the operator to move livestock quickly and efficiently.

Chargers are commonly used on large farms where the movement of livestock is a regular part of the operation. They are also used on small farms where the movement of livestock is a necessity.

Chargers are an important part of the farm operation, and they make it possible to move livestock quickly and efficiently. They are an essential tool for any farm that has livestock.
I was small and most of the fish was small. I would stand by the side of the dock with my legs wide apart, watching the fish jumping and flipping about. I would map out each fish, their jumps, and their flips, and the way they move. I would count the fish, the way they move, and the way they flip. A GRANDMOTHER SPEAKS

ON A LINCOLNSHIRE FARM

A 100-year-old lady who lives near us says that the farming methods have changed a lot over the years. She remembers when her own father was a farmer and he used to say that they used to have to work hard to get the crops planted and harvested. She says that now they have tractors and other machinery that can do the work in a fraction of the time. She also remembers when they used to have to milk the cows by hand, but now they have electric milking machines. She says that things have changed a lot, but she is glad to see that farming is still an important part of our lives.

MAY COMPETITIONS

We must remember that these competitions are still going on, and the results are due to be announced soon. Here are some of the events:

1. BEST GARDEN
2. BEST LEGUMES
3. BEST BERRIES
4. BEST FLOWERS
5. BEST FRUITS
6. BEST VEGETABLES

Prizes will be awarded to the winners of each category. The judges will be looking for the most beautiful and healthy plants and vegetables. The judging will take place on May 31st, and the results will be announced on June 1st.

MAY DAY FUND

A fund has been established with which it is hoped to set up a permanent memorial to Mary Day. Contributions, either as cheques or postal orders, are to be sent to the Mary Day Fund, at the Royal Agricultural Society, London.

February 14th

Another month has gone by, and the days are getting shorter and colder. I wonder if spring is really here yet. I hope it is, because I am looking forward to the warmer weather and the chance to go for long walks in the countryside.

February 15th

Today was a windy day, and the wind seemed to be blowing from all directions. It was hard to tell which way it was coming from. I hope it clears up soon, because I really need some sunshine.

February 16th

Today was a lovely day, and the sun shone brightly. I went for a walk in the countryside and enjoyed the fresh air and the warmth of the sun on my face. It was a wonderful day.

February 17th

Today was a rainy day, and the clouds were thick and grey. I stayed inside most of the day and read some books. I hope it clears up soon, because I really need some sunshine.

February 18th

Today was a sunny day, and the sun shone brightly. I went for a walk in the countryside and enjoyed the fresh air and the warmth of the sun on my face. It was a wonderful day.

BROADLAND HOLIDAY

Knit with P&B wools
—and save

The Plan
On Sunday, we planned a travelling picnic, the first of our kind. Our route - the shortest on the map - was to pass through the broads, along the norfolk coast, and finally wind up in the village of Wroxham. We left early, determined to make the most of our day. The sun was shining brightly, and we set off in high spirits. As we drove along the country roads, we enjoyed the peaceful countryside and the gentle breeze in our hair.

Special Start
From the village green, we boarded a small ferry that took us across a narrow waterway. We felt a little nervous at first, but quickly settled into the rhythm of the journey. The water was calm, and the ferry moved steadily towards its destination.

The Ferryman
As we arrived at the other side, we were greeted by a friendly ferryman. He explained the route to us and assured us that we were in capable hands. We felt a sense of relief and trust.

The Ferry Leaves
With a wave, the ferryman set off, and we followed it with our gaze. The water was still and quiet, creating a serene atmosphere.

Nature's Beauty
As we continued our journey, we marveled at the beauty of nature. The fields were lush and green, and the trees stood tall and proud. We could hardly contain our excitement as we approached the next destination:

The Village
We arrived at the village, and we were immediately struck by its charm. The buildings were quaint and picturesque, and the villagers were friendly and welcoming. We decided to explore the village for a while before heading back to the ferry.

The Ferry Returns
After a brief but memorable visit, we boarded the ferry once again. As it pulled away from the shore, we felt a sense of regret and anticipation for the next journey.

The Journey Ends
As the ferry approached its final destination, we looked out over the water, taking in the beauty of the surroundings. We felt a sense of contentment and satisfaction, knowing that we had made the most of our day.

The Ferry Arrives
Finally, we arrived back at the starting point. We felt a sense of accomplishment and pride in having completed our journey. We decided to reflect on our experiences and plan our next adventure.
USING THE OLD POTATOES

by MRS. ARTHUR WEBB

Have you a good look at your old potatoes?—the lucky company—other than a few sprouts and shoots. New potatoes and mushrooms are the real rub on the edges of the plate, and it is a credit to every cook to make a show of getting through this in perfect time and look good while doing it. Just keep your eye on the clock, and let’s get on with the task.

Stuffed Potatoes

6 large potatoes; 1 oz. garlic; 1 oz. dry mustard; 1 oz. paprika; 2 oz. breadcrumbs; 1 oz. cheese; 1 oz. chopped onion; 4 oz. hams; 1 oz. cream; 2 oz. butter; 6 oz. milk; salt and pepper.

Mash the potatoes quite soft, mix in the aromatics, hams, and cheese, and bind together with the cream and milk. Put into an oiled tin, and dot with butter. Bake in a moderate oven for 45 minutes, or until the potatoes are well cooked and the filling is set. This is a very simple and easy way to use up old potatoes, and it is sure to please the family.

Mock Grape

6 potatoes; 1 envelope gelatine; 4 oz. cold water; 4 oz. sugar; 3 oz. water; 1 oz. lemon juice; 1 oz. cream; 1 oz. rum; 1 oz. whisky.

Soak the gelatine in cold water. Place the potatoes in cold water, and cook until soft. Drain and press the potatoes through a cloth. Place a 1 oz. brick of gelatine in a little cold water and add to the potatoes. Add the sugar, water, lemon juice, cream, and rum. Boil well, and pour into a mould. When cold, turn out and garnish with a sprig of mint and a twist of lemon. Serve cold. This is a very nice and simple way to use up old potatoes. It is sure to please the family.

Pipe Put Ham in Print

This is a very simple and easy way to use up old potatoes, and it is sure to please the family.
